

HOME-SCALE PERMACULTURE SITE EVALUATIONS

Create *Your* Sustainable Future Today!

Apply Permaculture principles to your home...

Reduce food costs

Improve water availability & quality

Lower energy expenses

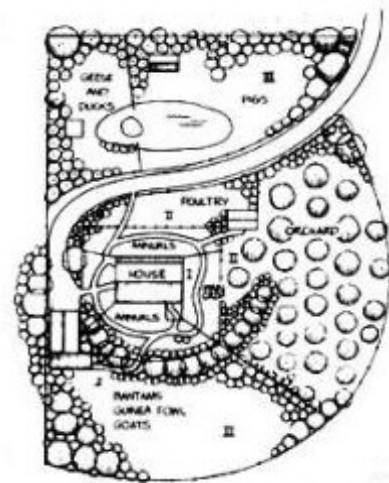

Increase self-reliance

Create abundance!

In a three-hour Permaculture site evaluation, I'll examine your home & land, determine your needs, and suggest design elements & systems that will maximize sustainability for the long term. This evaluation is not a complete Permaculture design, but serves as a wellspring of ideas which you can implement as time and resources allow.

Design considerations include...

- ✓ Site orientation & solar access
- ✓ Water flow, catchment & storage
- ✓ Sustainable food systems
- ✓ Energy flow and renewable energy systems
- ✓ Natural building materials & methods
- ✓ Animal systems
- ✓ Waste management & sanitation
- ✓ Economic self-sufficiency

\$175 for a 3-hour consultation
